CUSTOMER SUPPORT ANNOUNCEMENTS!

Paper-Less MES 5.4.0

Paper-Less is pleased to announce that MES/MV2 version 5.4.0 is now available for download!

This release offers customers new features such as phase 1 of our material handling workflows.   This allows users to report when material is picked complete using Mobile Apps. This action will update an icon on the WIP page indicating to the operator that all material is available and ready for the order.

Another major enhancement in 5.4.0 was done to the interface which imports data from the host ERP system into MES/MV2. This is often referred to as the "sync" process (commonly referred to as 'full' and 'mini' syncs). Under certain deployments, the current sync processes including system performance, response time, and throughput are substantially reduced. This initiative was aimed at improving the performance and throughput of both sync processes.

For a full list of enhancements and repairs please refer to the 5.4.0 Release Notes for more information.

If you would like to schedule an installation or have questions, please contact the Paper-Less Help Desk at Help.Desk@paperlessllc.com or 888.473.0800.

Troubleshooting Bulk Load Errors

One of the more common questions the Paper-Less Help Desk receives is related to data errors – missing MO's, PO's, Operations, Items, Inventory Locations, etc. These are known as "Bulk Load Errors" because they may have something to do with data configuration problems from the ERP system and as a result, end up in the MES SQL Bulk Load Table.

Troubleshooting Guide

ISE & Paper-Less

Leveraging over 35 years in the business technology industry focused on discrete manufacturing, we know how to provide an accurate representation on whetherour core competencies can meet your business needs.
