PAPER-LESS

Paper-Less Pick to Ship for XA

MANUFACTURING VISIBILITY AND VELOCITY FOR ACHIEVING EXCELLENCE IN MATERIALS HANDLING AND MATERIALS MANAGEMENT

Paper-Less Pick to Ship (P2S) for XA offers Infor XA customers a paperless solution for managing and enhancing customer order picking from warehouse to shipping, with real-time updates to pick lists and inventory locations.

P2S offers...

- shipping management and administration
- assignment and status of pick lists
- paperless pick processing

P2S streamlines fulfillment by providing...

- guided picking
- validation of product
- real-time entry, audit and update of activities

leading to the creation of an XA shipment with items, carrier information, and special charges.

Problems Solved by Paper-Less P2S for XA

A Paper-Less Solution
for managing and improving customer order picking from the warehouse location through to shipping.

Pick list can be assigned
to material handlers and they can automatically receive the next item to pick on their device.

Real-time Information Updates
for shipping and front office personnel. In addition to immediate inventory updates.

Activities are integrated
for sales orders, pick lists, and inventory.

Whether using laptops or mobile devices, Material Handlers can access P2S for immediate visibility into detailed location data, print labels, and to replace manual tasks. This increases pick velocity and accuracy to meet customer delivery requirements.

PAPER-LESS

Shipping Management & Administration

The Shipping Administrator can monitor pick lists, review picked items in staging locations, analyze eligible orders for shipping, generate shipment transactions, and update inventory from warehouse to staging to shipping.

- Handles various types of items including stock and non-stock items, kits and serialized parts
- Generates labels for the items picked and a summary of all the items picked.
- Eliminate "Wrong Picks" and inventory accuracy errors with item, location, batch-lot, and FIFO date validation.

(P2S Administration Screen)

Assignment & Status of Pick Lists

- Supervisors are able to view the status of each pick list and line items from their desktop including: pick not started, line started, line completed and pick list completed
- Offers supervisors the ability to allow for a group or single employee picking activity using pick list assignment and pick list locking features

(Sales order picking screen)

Paper-Less Pick Processing

- Material Handlers can sort their pick list items in Item or Location sequence in order to streamline the picking process according to their specific needs
